PROJECT

New York, New York Hotel and Casino
Las Vegas, NV

DETAILS

Black K-13®
Black SonaSpray "fc"
Celbar Wall Spray

Designed to reflect the street performers atmosphere of New York, the showroom features dark walls painted with graffiti. In fact, actual "taggers" were brought in from New York to apply their graffiti art work to the walls.

SonaSpray "fc" Black was sprayed at a thickness of 1" on all visible ceiling areas above the showroom's seating, covering 20,000 square feet. K-13 Black was sprayed in varying depths of 1-4 inches

on a fluted deck above the stage and seating area, as well as the proscenium wall between the stage and seating area. The side walls were also sprayed to enhance the dark, cave-like setting.

In addition to aesthetic requirements for the insulation product, the job demanded superior acoustic values. The casino's attractions include a Coney Island-style rollercoaster, an amusement center and a Motown Café with live entertainment—all just beyond the walls of the showroom. K-13 and SonaSpray "fc" provided the ideal solution for sound absorption, keeping exterior noises at a minimum and enhancing the sound quality of the showrooms's own performance.

The guest quarters area of the hotel casino also received a complete acoustical treatment. Celbar Wall Spray was installed

throughout the hotel's partition walls and down its hallways for sound control. The application consisted of 2½" of Celbar Wall Spray to achieve an STC rating of . With the application of Celbar Wall Spray, the hotel's acoustics are second to none. Guests can retrieve to their rooms after enjoying the entertainment and sounds that Las Vegas has to offer without having to worry about hearing any noises coming through the wall from other rooms or plumbing lines.

Hotels, casinos, baggage claim areas, gyms, schools and restaurants are just a few of the many types of projects that benefit from our products.
